Subject Quick question on the Proposition A tax rate figures

Hello,

I'm Robert Sharpe with the Freestone County Good Governance Council, a nonpartisan citizens' group doing an independent review of the county's hospital districts. We take no position on the ballot measure. We just want to be sure we understand the numbers correctly.

Our question: the Nov 3 ballot language for Proposition A says the $0.25 rate is $0.115677 higher than the voter-approval rate, and that last year's rate was $0.134323. But the district's 2026 Tax Rate Calculation Worksheet appears to show a voter-approval rate of $0.130152, which would make the difference $0.119848. Which figure is correct? Or did the ballot rely on a different or earlier calculation? We may simply be misreading something, so any clarification would be appreciated.

Thanks so much,

Robert P. Sharpe - RancherRob
